Working Prototype Known Problems Report

Comment Function:

Due to the time conflict between the two members who is been assigned the task, this function did not implement.

Visualization Axis:

Although the x y axis of the visualizations works properly when they are previewed live from the text editor, in web2py they are tend to be invisible sometimes. We tried to fix this by adjusting the margins of the SVG areas, but in some visualizations the problem stayed as unsolved.

Visualization Label:

Similar to the problem with the axis, although the labels are clearly visible when run the visualization from the text editor, in web2py the labels on y axis is not visible in some visualizations. Since it is visible for some of them and not visible for others, it was hard to understand what exactly was the problem. One solution to solve this was redesign the visualization pages to be in different html instead of being on the same, but this was going to put us back in the overall project.

Visualization Print for the Vis 2:

The print function is working for the first Visualization, but not the second ones. The member who implemented wasn't able to make it to the last meeting, so we weren't able to figure it out why it wasn't working.
